EDUCATION

Chulalongkorn University Bangkok, Thailand
B.Eng. Computer Engineering – GPA: 3.46 2025 – Present

EXPERIENCE

Senior Backend Developer Jun 2025 – Present
Information System Development (ISD) – Chulalongkorn University

- Designed API endpoints and core backend architecture, integrating database schemas for high-traffic university platforms, including registration and event websites, serving 10,000+ users and 500 peak concurrent users.
- Led the backend team through 3-week sprint cycles, managing workload distribution, conducting code reviews, and aligning with frontend and UX/UI teams for production delivery.
- Developed backend services in TypeScript, Go, and PostgreSQL, including onboarding flows, authentication, authorization, code redemption, coin-based transactions, a gift/reward system, and an event check-in system.

Developer Feb 2026 – Present
Thinc.in.th

- Built the judging system for beauty pageants – live in production such as Miss World Thailand 2026 – using Next.js, integrating APIs, room-based authentication, real-time short polling, and persistence score drafting.
- Maintained the learn.thinc.in.th knowledge platform using Astro, revamping the site for a new brand CI and enhancing user experience through features such as a table of contents and author attribution.

Software Engineer Aug 2026 – Present
Engineering Student Committee (ESC) – Chulalongkorn University

- Developed the frontend for an internal finance tracker web application using Next.js, building dashboard interfaces and charting components to visualize financial data.

Assistant Product Manager Sep 2026 – Present
Awarehouse

- Formulated the initial product scope for a BMA property tax audit system by researching Thai tax regulations, statutory tax loopholes, international case studies, aerial-audit use cases, and geospatial data feasibility.
- Constructed evaluation test cases for the initial building change-detection prototype.

PROJECTS

Vishnu24th Camp

- Developed a full-stack Next.js web application for an engineering freshman camp, from designing APIs and Firestore database schemas to implementing backend services, and integrating Firebase Google Sign-In.
- Implemented a token bucket rate limiter for a Popcat replica feature to prevent API spam and ensure stability.
- Performed load testing using k6, handling 100 req/s for a camp of 1,500 users.

myCourseVille Parser

- Created a Python CLI tool with BeautifulSoup to automate downloading enrolled course materials.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Go, SQL, Python, C, C++, Java
Frameworks & Libraries: Next.js, React, Astro, Express.js, Fiber, Prisma, GORM
Tools: Git, Docker, PostgreSQL, MongoDB, Firebase, Vercel, k6
